High Performance Flooring for High-Tech Laboratory

Over a phased installation programme, 4m were able to deliver a truly state-of-the-art system for Astra Zeneca which fulfilled all their requirements.

Used in a high-tech laboratory area, a high performance anti-static terrazzo was laid over 1,000 square metres to deliver the right environment for production on site.

Over the complex project, the skills of our design and installation team were put to good use to devise a suitable system for the site.

A specially created colour scheme was developed for the project.

4m's specialist design team leads the way in flooring for the pharmaceutical sector. Our experts are able to supply and fit the latest flooring systems designed to provide the clean, germ free environment needed in a sensitive environment.

A range of seamless floors and special features designed to combat the build up of static and bacteria can match up to the most testing specifications.
