4m Floors the Big Cat

Jaguar Cars once again called upon the services of 4m to install their new floor at their production plant in Halewood.

The 17,000m² production area refurbishment is to be completed over various phases during 2010, so not to cause disruption to the running of the plant.

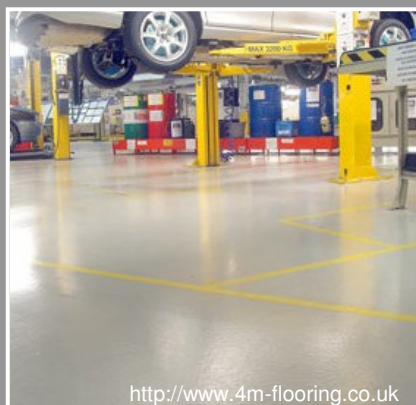

Phase One, totalling 2,000m², took place over the Christmas 2009 shutdown period.

The existing floor was prepared by shotblasting followed by hand-held grinding to ensure all contaminants were removed and a clean smooth surface was left.

Our specialist team then applied the chosen floor system, consisting of a DPM coating followed by a fast drying, strong and durable self levelling pumped screed system, topped off with a 2 coat coloured epoxy system with demarcation lines and the re-installation of expansion joints.

John Amis, 4m's Contract Manager for the works said, "The finished floor for Phase One looks superb. The client is extremely happy with the work so far and is exceptionally pleased that we can programme the phases to meet their needs.

Jaguar Cars have been a client of 4m's for many years and we are tremendously pleased to have been awarded this large project."
