### New Hospital Floors installed by 4m

4m completed one of the largest screeding projects undertaken in recent years at Taylor Woodrow's development of two hospitals on Merseyside.

Over 100,000 square meters of Damp Proof Membrane topped with a pump screed system was applied at Whiston and St Helens Hospitals.

To create the right levels at both developments, 4m applied Flowcrete's time proven screed, Isocrete 1500. The product's exceptional strength and speed of application enabled 4m to finish ahead of a tight construction timetable.

4m have major experience working in the hospital and healthcare sector, where our well-trained, trusted staff, unrivalled product range and solutions-led approach have all helped secure ongoing projects across the UK.

We recognise the need for cleanliness and can install products with anti-microbial finishes based on the natural purification element silver, which can kill the growth of bacteria or viruses, including MRSA. Seamless floors and coving also mean floors are easier to clean and there are no cracks where bacteria can grow
