4m Completes Large Scale Project at Vauxhall Motors

4m Flooring uk have completed another prestigious installation in the North West, delivered a functional floor for Vauxhall's high-tech flexi site in Ellesmere Port.

Working to tight deadlines the floor had to be installed completely in just seven weeks. 50,000 square metres of flooring were installed as part of a £2.6 million package awarded to 4m.

A special Vauxhall grey colour epoxy resin was used for the installation, which needed to be exceptionally flat to a degree of plus or minus 3mm. Demarcation lines and directional routes complete the project.

The project followed a previous installation by 4m at Vauxhall, where a 2mm self-levelling epoxy screed was used over a 60,000 square metre area at the site, within the Ellesmere Port production facility.

4m has previously installed over 200,000 square meters of specialist industrial flooring at the site and was appointed in 2005 by Vauxhall as their partner in flooring solutions.

Dave Burrows, Senior Regional Engineer at Vauxhall said "The works have been carried out in a wide range of areas, each presenting different situations associated with the working environment. 4m has adapted to the location requirements and provided the correct level of detail and control over the works. The project has transformed the appearance of the plant."
