### Westfield's Welcoming Car Park

4m flooring uk was tasked with a major project to install car park decking at Westfield Derby which offers one of the UK's largest retail car parking facilities.

Almost 80,000 square metres of car park decking and screeds were applied at the new development, creating a welcoming, safe and protective surface underfoot.

4m applied decking at two separate sites, in the basement car park under a refurbishment project and in a multi-storey new-build car park, where the product was installed on the outdoor top deck and other floors of the development.

The car park project came on the back of works awarded beforehand to 4m at Westfield Derby, where the company installed 14,000 square metres of Flowcrete's Isocrete K-Screed and 7,000 square metres of the high-strength polymer screed Isopol at the development.

David Roach, of 4m flooring uk, said: "Westfield Derby is a major new shopping destination and the car parks reflect the prestigious nature of the development."
