

**TITLE: UK Industrial Tape Manufacturer**

ACC Flooring were invited to offer solutions for a manufacturing facility in West Yorkshire which was to undergo a major refurbishment to include the floors throughout the premises,

The client is a world market leader with production units throughout the world, in particular the UK and United States of America.

The project involved mainly working during tight shutdown times, this actual project was completed over a 3-day shutdown.

The original order was for 1500m<sup>2</sup>, however with phases 2 & 3, this amount increased to in excess of 6,000m<sup>2</sup> of mainly polyurethane screed.

Due to the limited shutdown period polyurethane screed was selected to save time as the existing concrete substrate was covered in 12 years of floor paint which had previously been applied as and when production allowed by the client's own staff. By the time this was removed, the profile would have been unsuitable to simply apply a high build coating.

The client wanted to introduce a whole new colour scheme to include safety demarcation, pedestrian walkways and hatched areas. The majority of the floor was treated with a polyurethane screed, however where all the demarcation was installed, we applied coloured, epoxy high build coatings to allow anti-slip and bright colours to be used.

The polyurethane screed was ideal to allow large prepared areas to be returned to production much quicker due to its fast curing, single application technology.

ACC Flooring Limited offers an installation service using all FeRFA approved flooring products, in all industries throughout the UK. Contact can be made free 08005420518 or via our website [www.accflooring.co.uk](http://www.accflooring.co.uk). July 2011 will see us celebrating 25 years in the resin flooring industry.

When you require a resin floor that meets all your budgets and expectations, call ACC Flooring Limited.
