Redundant Farm Building transformed to Stunning Photographic Studio

ACC Flooring Ltd has transformed a redundant farm building, previously used to store agriculture vehicles, into a modern minimalist photographic studio for the 21st century.

The existing building had an uneven concrete base, which had been hand-mixed by the farmer, and was unsuitable for application of a resin floor. A 75mm thick polymer screed was applied and allowed to cure; then, as there was no damp proof membrane, this was followed by two coats of Altroproof.

Because the area was to be used as a photographic studio, the client required a system that was very high gloss and it had to be white. This finish was achieved with Altroflow laid at a nominal thickness of 3mm.

The client, one of UK's top photographers, who is thrilled with the finish, said: "The floor is superb, I cannot believe how this old building has been transformed."
