

## Flooring fit for a Queen from ACC

SECTOR: Food

Queen Elizabeth Grammar School, Wakefield was founded by The Royal Charter of Queen Elizabeth 1 in 1591 and today it remains one of the leading schools in England.

This project involved the removal of all existing kitchen equipment, floor surfaces and drains, prior to replacing the floors and drains and refitting all the kitchen equipment.

The project was carried out during a school holiday, to enable the kitchen to close without disruption.

The kitchen and adjoining storage and preparation rooms measured a total of 170m<sup>2</sup>.

It was fortunate, being a school, that the shutdown could be planned around the school holidays; this meant that all the kitchen equipment could be removed and stored whilst the works were being undertaken.

Due to the age and design of the building, the access was very limited, however, as we were undertaking the whole project, our Contracts Manager could manage the careful removal and storage.

As soon as all the kitchen equipment was removed, we then had to remove all existing coverings, to include the existing drain system

The client selected Altro resin products, as he knew they would provide the optimum level of hygiene required for the kitchen. Tiles had been previously used, however, they offered limited slip resistance.

The existing sub floor had to be removed to allow for the polymer screed to be laid to falls to the new drains, this would assist with the housekeeping.

The completed project is now a fully functional school kitchen, with durable, easy to clean flooring throughout. The new drain design is working excellently and all vessels simply drain into them, this makes day-to-day cleaning much quicker and indeed more effective.

If we can help on your next project, please browse our very informative website, where you can find the full range of FeRFA approved flooring types.
