

PRESS RELEASE

ACC FLOORING CLEAN UP AGAIN

Following another successful installation of a polyurethane screed, we were recently contacted by Cannon Hygiene to carry out an installation in a Wet Area which required a heavy-duty floor screed.

The existing floor had been laid using a fibreglass type system, which was failing and causing a trip hazard. We removed the entire existing floor, to allow us to start again with clean concrete. The whole process was carried out in one weekend to prevent any inconvenience.

The new polyurethane screed, classified by FeRFA as Type 8, will provide many years of service, and will be excellent in the wet area due to its profile.

As an essential services provider to businesses, Cannon Hygiene offer a range of services and products that have proved time and time again to be those that organisations across all industry sectors require on a daily basis.

This is the 6th Service Centre that we have carried out resin flooring works in and we continue to provide solutions to Cannon throughout the UK.

Cannon Hygiene said, "As usual, the resin floor applied by ACC Flooring is proving to be very popular with the staff and providing safe floors, which we require". ACC Flooring has installed this system in many other Cannon sites, and it is standing the rigours of our environment.

ACC Flooring carry out all types of seamless resin flooring in all industries on a national basis, using products manufactured in the UK. All our staffs are fully trained to NVQ standards; this training is fully supported by the industry governing body, FeRFA.
