

Altro Provides Award Winning Results to St Ita's Hospital

AltroCast TB Screed

Interior surfaces specialist Altro has supplied its award winning resin flooring for the new €2.2 million Palliative Care Unit at St Ita's Hospital in Newcastle West, Co Limerick.

The new unit, which will provide care for patients with advanced cancer, is equipped with four beds and has day facilities for outpatients.

A key aim of palliative care is to provide improved quality of life for terminally ill patients, so the flooring within the new unit needed to contribute to a pleasant interior feel whilst meeting the clinical needs of a working medical facility.

AltroCast TB Screed resin flooring in Highland was chosen and installed by John Slattery from John Slattery Hygienic Applications Ltd. This 3mm thick epoxy screed provides a hard wearing and practical surface with excellent hygienic properties.

The future is safer with altro.

"We chose AltroCast TB for St Ita's Hospital based on our previous experience of using Altro's range of resin products within the healthcare environment. Resin provides an attractive finish which is easy to keep in peak condition, providing St Ita's Hospital with a flooring solution that will stay looking great for years to come."

John Slattery, Hygienic Applications Ltd.

"When constructing the new palliative care unit, we knew that hygiene was of critical importance so did not want to use tiles due to the potential for bacteria to harbour and multiply within the joints. Working with John Slattery and Altro, we chose to use AltroCast on both the floors and walls. This would allow us to achieve a coloured, seamless and hygienic system which had a light reflective value (LRV) suitable for aiding visually impaired people. The finished result has far exceeded our expectations. Using Altro's recommended cleaning procedures for resin surfaces, our staff have been able to introduce new techniques to help to streamline their work and keep the surfaces in superb condition."

John Phillips, site services manager, St Ita's Hospital
