

## PRESS RELEASE

### Conren Carry on the Buses !

Epoxy resin specialists, Conren Limited, has completed a major flooring project for a new £5m ultra-modern bus depot complex in Bournemouth.

Built by the Building division of Norwest Holst Limited for the Yellow Bus Company, the new 4 acre site at Yeomans Way incorporates storage for up to 120 buses and 20 coaches.

An area of approx. 1,700 m<sup>2</sup> of new powerfloated concrete was firstly shotblasted and treated with WD Aquatect moisture vapour suppressant. The special properties of Conren's WD Aquatect allowed early installation of the flooring works, in order to meet the project's fast track programme.

Finally, Dustguard heavy duty epoxy resin coating was applied, complete with demarcation lines, to provide a hardwearing finish to the depot floor.

Conren manufacture and install a wide range of resin coatings, screeds, play surfacing, and high friction anti-skid for roads. Details of the full range of products can be found on [www.conren.com](http://www.conren.com)
