

DCP Peaks in Flooring

Don Construction Products (DCP) Ltd.'s high performance industrial flooring systems have been used during the refurbishment of a London showroom for sports clothing company, Peak Performance. Designed by interior specialists BG Arkitekter, the showroom required a coloured, aesthetically pleasing, durable floor finish.

As such, main contractor on the project, Innovate Space used DCP's Cemflow Topping in light grey in the showroom area. Ideal for areas subjected to medium to heavy traffic, Cemflow Topping is a 'Special Class' cementitious, fast drying, self-levelling screed.

To provide a clear sealed floor finish, Strongcoat WD, a solvent-free, water-based epoxy coating, was applied directly onto the screed. One coat of Strongcoat Matt epoxy resin was then used to complete the floor at the Peak Performance showroom. Curing to a matt finish, Strongcoat Matt provides a slip-resistance surface, ideal for the retail environment.
