## **DCP Renews Floor**

Don Construction Products (DCP) Ltd.'s high performance flooring systems were specified in the conversion of a former pottery works in Stoke-on-Trent. Working with the main contractors, P Casey & Co. Ltd., DCP helped to regenerate the site into small enterprise units and a skills training centre for RENEW North Staffordshire.

To complete the flooring in part of the building, Strongcoat HB, a high build epoxy coating was applied directly on top of the screed. Quick and easy to apply, Strongcoat HB is a two-pack, solvent-free coating system which provides a seamless, hygienic and aesthetically pleasing finish for floors.

Where a mezzanine flooring system had been installed, Strongcoat FHB was applied to the surface to ensure the floor was resistant to wear and trafficking. Formulated for ease of application, Strongcoat FHB is a flexible high build protective floor coating, providing low maintenance and easy cleaning for the finished floor.

P Casey & Co. Ltd., comment "Providing ease of use, as well as valuable anti-slip properties, DCP's products were ideal for the conversion of the pottery works. The high performance floor coating systems maximised the appearance of the new floors, ensuring a durable, aesthetically pleasing finish."
