DENHOLM INDUSTRIAL SERVICES SAFELY REACH FOR GOLD

Denholm Industrial Services have added to their silver award success, following a first RoSPA Safety Award entry in 2010 by scooping a gold award in 2011.

Since 1956, RoSPA has organised its prestigious national award scheme to recognise excellence in work-related health and safety performance by private and public sector organisations. Based on assessment of a broad portfolio of evidence about the level of development and performance of Denholm's occupational health and safety management system, the scheme also takes into account reportable accident rate and enforcement experience.

Denholm Managing Director, Dave Bonaccorsi, commented that "This RoSPA award is a significant milestone in the recognition of Denholm Industrial Services' high standards of health and safety performance through management leadership, commitment, accountability and participation demonstrated within the organisation at all levels."

Denholm Industrial Services provides support services to companies undertaking construction and maintenance work in the UK.

With a skilled and experienced workforce, a broad range of services, conveniently located offices, the support of the Denholm Group and, most importantly, a firm commitment to meeting our Customers' requirements, Denholm Industrial Services deliver a first class service.

Utilising up to date technology, Denholm's surface preparation division has the capability and expertise to undertake all sizes of contracts. From simple to complex, it offers a high quality and professional service, tailored to suit individual project requirements.

An efficient and timely approach to such projects makes Denholm a preferred supplier to a number of customers nationwide, providing cost-effective methods to produce a totally prepared surface, ready to accept any specified finish for all sectors of industry including industrial, petrochemical, dockyards, bridges/roads, offices and retail.

Denholm provides a complete range of surface preparation, for substrates from concrete through to steel, including closed circuit track and vertical blasting, open abrasive blasting, hydro blasting, bead blasting, concrete grinding, scarifying and all methods of mechanical preparation.
