

Flowshield Delivers Seamless Surface At Pharma Facility

• Product: Flowshield • Market Sector: Pharmaceutical • Location: South Africa
• Client: Cipla/Medpro Pharmaceuticals • Date: 2007

Flowcrete's seamless self-levelling Flowshield system beat off tough competition to be selected as the floor finish for the upgraded pharmaceutical manufacturing and packing facility in Mobeni, Durban, operated by Cipla/Medpro.

The organisation is one of South Africa's largest recognised Black Economic Empowerment (BEE) businesses.

The highly complex 4,000 sq metre project involved lining new cubicles with a coved skirting detail installed onto aluminium and PVC cladding and then sealed to the matching floor.

The new concrete screed was then lined with the self-smoothing Flowshield SL at 2mm thickness. The sleek floor finish is easy to clean and sterilise. Offering high chemical resistance, the Flowshield will withstand high levels of foot and pallet truck traffic.
