

Flowfresh Keeps Bug At Bay At Manash Uni Bio-Lab

• Product: Flowfresh, Flowshield Quartz & Flowseal • Market Sector: Pharmaceutical
• Location: Malaysia • Client: Monash University Malaysia • Date: 2008

Monash University Malaysia selected performance flooring finishes from Flowcrete for the fit-out of its bio studies laboratories where the need to maintain a safe anti-bacterial environment was among the top priorities.

Based on a previous successful installation at KL Convention Centre, main contractor Sunway Construction proposed the seamless polyurethane Flowfresh system for this application.

A unique anti-microbial agent in Flowfresh works around the clock to deliver continuous protection against a range of bacteria, including E.Coli, MRSA, Salmonella Typhi, Staphylococcus Aureus and SARS. Flowfresh is also able to prevent the growth of a number of unpleasant mould and fungi.

Flowfresh is a seamless, hard-wearing floor finish that is easy to clean and requires minimum maintenance. Large expanses of wall area at Monash University were also coated with Flowcrete's Flowseal EPW to provide a hygienic matt finish.
