

Flowcrete stepping up at Pinderfield Hospital

• Product: Hydraseal & Isocrete 1500 • Market Sector: Healthcare • Location: UK
• Client: Pinderfield and Pontefract Hospitals Joint Venture • Date: 2009

When Pinderfield and Pontefract hospitals undertook a £300m scheme to deliver a new acute inpatient hospital in Wakefield, Flowcrete were ready to deliver a flooring solution which would meet all the health and safety plus design requirements of the project.

The joint venture was to deliver Pinderfield hospital on the existing site and a new hospital in Pontefract with a focus on patient and staff environment, delivering daylight and views to all occupied rooms in a state-of-the-art construction.

The whole of Pinderfield hospital was floored using a power floated slab with Hydraseal and Isocrete 1500 thin coat levelling screed to ensure a safe hygienic base on which to lay the vinyl finish. Hydraseal was chosen to control the construction moisture from the slab below to ensure that it didn't affect the finishes.

Over 20k square metres of flooring was laid throughout the iconic development to deliver a robust, hygienic and safe environment; enabling the 700 bed hospital to be up and running within the tight timescales.
