

PRESS RELEASE

Flowcrete's Towering Strength

Flowcrete's commitment to providing the complete solution for new-build and refurbishment projects reached new heights with a development in the United Arab Emirates

The company's time-proven Isocrete K-Screed - used for almost 40 years on major projects across the UK – has created a strong platform underfoot at Capital Towers, a high-profile new development in Dubai.

More than 10,000 square metres of the floor screed have been installed in the ball room, entrance lobby and VIP area of the glass-clad building.

Flowcrete's car park decking system Deckshield has also been installed at the centre's elegant car park zone, where a total of 28,000 square metres of the product have been applied.

Andrew Gwyther, of Flowcrete Middle East, said: "Isocrete K-Screed has underpinned some of the biggest construction projects in the UK and its qualities are increasingly being recognized in the Gulf region.

"K-Screed's sheer strength gets construction projects off the ground, while its speed of installation and versatility enables it to fit in with even the most demanding building schedules.

"Deckshield has been specified here for a number of years now and this is the latest in a number of high profile projects utilizing the system.

"Overall, the project at Capital Towers reflects Flowcrete's ability to deliver a variety of products that fit the exact needs of the client."

In the UK, Isocrete K-Screed is also available under a 'one stop shop' solution for the floor, combined with Isowarm underfloor heating and a wide-range of decorative floor finishes, all installed by just one approved contractor.
