

New Flowcrete Floor Services Audi Body Shop

• Product: Flowcoat SF41 • Market Sector: Automotive • Location: UK
• Client: Audi Body Shop Hillington • Date: 2009

As part of a major investment in the latest accident repair technology; Flowcrete's Flowcoat SF41 has rejuvenated the Hillington Audi Body Shop with a fresh, hard-wearing and impact resistant floor.

Time was of the essence in this 1,800 square metre refurbishment as the Audi Shop needed to be back in business with a minimum disruption to operations as quickly as possible. Flowcrete's seamless Flowcoat SF41 ensured that the daily traffic of vehicles in the workshop was back on the move in a matter of days.

Once the floor had been prepared by a combination of Closed Circuit Abrasive Blasting and Diamond Grinding, two coats of the high-performance Flowcoat SF41 resin were installed. Excellent stain and chemical resistance properties, anti-slip surface and tough durable finish secured Flowcoat SF41 as the clear choice for this project which demanded a safe, easy to clean and built to last flooring solution.

The efficient and professional floor refurbishment compliments the Audi image of quality, style and reliability. The top quality aesthetic and performance properties have left the client delighted with the finished result.
