

Flowcrete's Bold Storage Solution for Nelgeron

•Product: Peran SL •Market Sector: Warehousing •Location: Estonia •Client: Nelgeron Gruppe
•Date: 2006

Over 3000m² of Flowcrete's smooth resin floor topping, Peran SL, has been installed in a large warehouse facility owned by the Nelgeron Group in Tallinn Estonia.

Nelgeron specialises in freight, logistics and storage, opening a massive 5459 square metre warehousing facility in Estonia in 2006 to hold specialised cargo of any size, shape or quantity.

Flowcrete's self-smoothing epoxy resin floor screed, Peran SL was chosen for the new warehouse project on account of its extreme strength and wearability.

Able to withstand heavy volumes of foot and wheeled forklift truck traffic on a daily basis Peran SL offers the necessary scratch, abrasion and impact resistance needed for heavy-duty areas of this kind.

Peran SL also combines strength with an excellent aesthetic and is available in a striking range of decorative colours.

Other benefits of the system include impressive chemical resistance properties as well as a joint-free finish, which makes the completed floor easy to both clean and maintain.
