

Flowcrete's Colourful Flooring at Olivar de Segura

• Product: Flowfresh MF • Market Sector: Food & Drink • Location: Spain • Client: Olivar de Segura
• Date: 2008

Flowcrete has provided a colourful antimicrobial flooring solution for a leading Spanish producer of extra virgin olive oil, Olivar de Segura – a second-grade co-operative company based in Andalucía.

Situated in the northeast of Jaén province, Olivar de Segura cultivates its entire crop in the Natural Park of Segura, Cazorla y Las Villas – a mountainous region known for its outstanding natural beauty and lush landscape of olive and pine trees.

In order to provide a hygienic platform for operations, Olivar de Segura required a seamless polyurethane resin flooring system for all zones contained within its processing plant.

Flowcrete's self-smoothing antimicrobial flooring system, Flowfresh MF, was chosen for the project for its ability to provide an easily cleaned and sterilised surface that has been perfectly adapted for the food and drinks manufacturing industries.

As a result over 2000m² of Flowfresh MF flooring, laid at a thickness of 5mm, was applied in Olivar de Segura's production, preparation, conditioning and distribution departments over an installation period of just three weeks.

Containing a powerful silver-ion based antimicrobial additive, Polygiene®, Flowfresh MF has been proven to control the bacterial population on the surface of the floor by up to 99.9% and offers total protection against a host of bacteria, moulds and viruses.

Combined with excellent durability, chemical and heat resistance as well as a colourful aesthetic Flowfresh is the ideal flooring choice for food processing environments where sanitation is of paramount concern. In addition Flowfresh MF meets all of the performance requirements of CSTB P/M 3444 and INRS 0.38 Classification R12.
