

### Making First Impressions Count in Riga

• Product: Deckshield ED & ID • Market Sector: Residential • Country: Latvia  
• Client: Private Apartment, 11 Vagnera Street • Date: 2008

Flowcrete has been involved in the major restoration of an historic building, located in the heart of the Baltic States in Latvia.

The project involved a private apartment complex situated on Vagnera Street in the Old Town of Riga, a beautiful and historic city that attracts thousands of tourists from across the world each year - particularly the British, who love to visit Riga for the well renowned nightlife and local beer.

The owner of the building was undertaking a major refurbishment and hoping to convert the existing old building into a luxury apartment complex (sq metre prices starting from 5000 EUR). This included the additions of an underground and external car parking structure to keep residents' vehicles safe at night.

In total 500 sq metres of Flowcrete's waterproof car park coating system Deckshield were specified for the project. This included around 200 sq metres of Deckshield ED, in a vibrant red colour, for the exposed ground-level car park alongside 300 sq metres of Deckshield, again in a Red colour, for the newly built underground parking facility. In both instances, Dynagrip, a slip-resistant coating was added into the mix to protect residents underfoot.

Deckshield is exceptionally hard wearing, with high durability and abrasion resistance allowing it to stand up to heavy traffic, fuel and chemical spillages. On top of this, Deckshield offers excellent aesthetics and is available in a wide range of creative colours and textures.
