

## Another Premier League Installation by Flo-Dek (UK) Ltd

When American Entrepreneur Randy Lerner became owner and chairman of England Premiership Football Club, Aston Villa, he had a long term vision for the development of the club and the historic Villa Park stadium. As part of the stadium development plan, June 2009 saw the famous Holte End given a fantastic makeover, with the creation of a new bar and suite complex, together with a totally new look for the tired looking main staircases.

Mansell construction, a long term partner of Aston Villa contacted resin flooring specialists Flo-Dek (UK) Ltd to survey the staircases and create a specification that would deliver a striking new finish as a key part of making the Holte End a focal point of the stadium.

Due to the tight project timescale and to overcome traditional British summer weather constraints, Flo-Dek (UK) Ltd recommended a range of fast curing Degafloor resin systems. Aston Villa FC and Mansell Construction were delighted with the recommended solutions and selected a bespoke Degafloor QT system for the risers and a QTA system for the treads, both finished in a unique Terracotta Quartz. To comply with current DDA legislation (Disability Discrimination Act), Flo-Dek finished the stairs with a separately formed QTA nosing in white.

The new bar and suite complex sits partially below the main staircases, so the entire 600 sq m area was also treated with a Degafloor

concrete crack seal and a flexible Degafloor waterproof membrane to deliver a totally impervious solution.

Speaking on behalf of Flo-Dek (UK) Ltd, sales director Dave Cope said 'This was a very complex and demanding project. The colours had to match perfectly the existing stonework details of the historic stand, and the coved finish between the treads and risers, together with the hand formed nosings required a high level of skill and attention to detail. Both Aston villa football Club and Mansell Construction are delighted with the finished staircases and we look forward to working with the club in the future'.
