

NEW FLOOR ON THE MENU AT UNIVERSAL SQUARE MANCHESTER

Leeds based FeRFA contractor, Fresco Industrial Ltd has recently installed this beautiful floor in the new restaurant of an office building at Universal Square Manchester

The floor area was approximately 350m² and the substrate was prepared using vacuum controlled shot blasting followed by two roller applied coats of Hydraseal DPM. Eleven tons of Isocrete Self Level Plus were then pumped to a thickness of 25mm in one day. After curing this was primed with Flowcrete's Peran STC which was allowed to cure prior to the application by rake of Peran SL at 3mm.

The whole project was completed in six days and the client, Planscape, are delighted with the finished results.
