## Belmay UK Ltd

### :: Installation requirements

Belmay, global creator and manufacturer of fragrances required a floor that would provide outstanding resistance to the raw materials used in the fragrance evaluation suite.

The previous floor was a painted concrete finish, which offered little durability or resistance. There were cracks in the surface, which made the floor look worn and in need of a better solution.

### :: Why National Flooring?

After initial consultation and inspection of the floor national Flooring proposed the 4mm Degaflor Flake system, which offered many advantageous benefits including outstanding durability. The system, which incorporates decorative flakes into the surface, enabled Belmay to have a finish that reflected their corporate colours. Due to occasional spillages of fragrances it was decided that the floor should be installed with a textured finish to provide a degree of slip resistance.

Being a global manufacturer, Belmay have limited periods for breaks in production and therefore National Flooring's specification was an ideal solution. The system cures fully 2 hours after installation and with our own experience installation teams a professional and efficient installation was completed over 2 days. The suite was then put back into full use the following day

Martin Holt, Factory Manager commented, "National Flooring provided a professional service with minimal disruption to a busy service area. They were reliable and organised and we are extremely happy with the result.
