

## DIAMOND PADS PROVE IDEAL FOR FLOOR PREPARATION

The Preparation Group's SFD surface finishing pads are successfully tackling a wide range of floor preparation problems being ideally suited to grind, clean, maintain and shine, resin floor surfaces, terrazzo, marble, natural stone concrete and vinyl., The Preparation Group's SFD Surface Finishing Diamond Pads provide optimum cleaning and polishing results.

Unlike similar products, the resin diamond dots on the SFDs are bonded onto the pads. This makes them highly durable- grinding, keying, texturing, sanding and polishing without clogging. They are the only pad system capable of grinding and polishing a floor from start to finish, not just refurbishing previously finished surfaces. Cost effective, and environmentally friendly the floor is cleaned consistently without the need for harsh chemical cleaners, waxes or polishes.

They are designed to fit The Preparation Group's STG machine, along with most other types of single head grinder/polishers, auto scrubbing and polishing machines. They are available in a range of grades from 100 to 3000 grit, the selection depending on the condition and type of surface.

The SFD system is a staged process involving working up through the grit sizes, to achieve the desired finish. After primary grinding to remove deep scratches, uneven spots or joints, the cleaning and polishing action produces a high gloss finish on new or old concrete, stone, marble and terrazzo surfaces. Other benefits of SFDs are that they are easy to change without the need for tools, adjust to irregularities in the floor, can be used either wet or dry for a smooth textured finish and are ideal for small areas and even edgework.

The Preparation Group, Deacon Road, Lincoln, LN2 4JB
