NEW WET DRY VAC – ONE MACHINE DOES IT ALL

The Preparation Group has launched a new powerful vacuum designed to effectively remove both solid debris and liquid spills. The multi-purpose M450 Wet/Dry Vacuum offers an efficient space and cost saving solution - flooring contractors no longer need to own two separate machines to deal with different 'waste' materials.

The Preparation Group's M450 Wet/Dry Vacuum stops dust entering the atmosphere by removing debris from inside surface preparation equipment and is equally effective at removing liquids during operations such as wet grinding or wet saw cutting. The unit can be used with small hand tools right up to heavy duty planers & grinders.

Unlike some insubstantial models currently available on the market, the new M450 Wet/Dry

Vacuum is built from high grade steel. It is extremely robust and, incorporating the latest technology, requires minimal maintenance. It has a large 60 litre quick release dust bin and three motors. The filter is easily cleaned via an external shaker handle.
