

RESIN SURFACES LIMITED

## RSL floors world's biggest print plant

It's all good news at News International and work is continuing at a rapid pace on one of Europe's largest state of the art high tech printing facilities at Broxbourne in Hertfordshire for News International.

Constructed by Carillion, the main contractor who appointed Datum Industrial Flooring Limited in partnership with Resin Surfaces Limited, to provide all the synthetic resin finishes for the entire plant, the works are on schedule and the area looks less like a building site every day as floor installation after installation is completed on time and problem free.

An overriding requirement prior to the commencement of the project for Carillion was to choose partners who they could both work with and who could deliver the flooring projects to schedule for this multi-million pound facility. Despite a world wide shortage of resin at the beginning of the project, Resin Surfaces Limited achieved the planned delivery dates due to their knowledge of the market and astute purchasing working with their partners within the supply chain.

Throughout the winter months, heated containers were used to ensure materials both arrived and were stored on site at optimum temperatures to enable installation to be uninterrupted throughout the winter and were therefore installed in a controlled environment by Datum Industrial Flooring Limited.

Over 35,000 square metres of differing synthetic resin systems are being installed in News International at Broxbourne, including RS Dampshield (damp-proof membrane), Resutop and Resucoat HB anti-slip coatings (epoxy high build coating), Resuflor (epoxy self-smoother) Resustat ESM (epoxy anti-static self smoother) Resuscreed Quartz (decorative bespoke quartz system) designed especially for News International. All of the above systems were installed by the experienced and dedicated floor-installation teams employed by Datum Industrial Flooring.

A significant requirement from the beginning was for fast-curing primers and safe low taint products to meet the stringent Health and Safety requirement of both the installers and the hundreds of employees working on site at any given time. These requirements were met and exceeded by the established formulated products of Resin Surfaces Limited.

All key programme dates have been achieved by consistent on time product delivery and dedicated high standards of workmanship, flexible project management has included constant monitoring and testing of the installed areas.

This project demonstrates Partnering in Action between Carillion, Datum Industrial Flooring Limited and Resin Surfaces Limited.
