

# Heidelberg Graphics Brentford

Heidelberg Graphic Equipment Limited are the UK subsidiary of Heidelberg GmbH, the global leader in print production technology and print equipment manufacturing. Their facilities management team wanted to upgrade and improve the appearance of their printing equipment showroom in Brentford.

The existing five year old conventional epoxy floor system, was not standing up to the demands of daily use for their multi million pound equipment. The Heidelberg machines can weigh up to three tonnes each. They have to be moved frequently and configured differently to demonstrate format and print production capabilities, according to their customers' requirements.

Remmers Technical Service were consulted to assist Heidelberg in their decision. They assessed

the condition of existing floors and the future performance requirements. This Remmers service included assessment of the point loadings, abrasion and scratch resistance, decorative appearance and the positive cleaning regime. Then they were able to provide the ideal solution for this prestige showroom.

The solution was the highly durable yet decorative Remmers Sediment Flake System. This incorporates extremely hard, graded quartz aggregates with coloured flakes, to produce almost any decorative design of the clients' choice.

The Remmers Sediment Flake System is based on an advanced solvent free tough epoxy resin which means that the system is fast curing, extremely durable and hard wearing yet easily cleaned with an excellent visual appearance. The multi-coloured dense surface structure, also

means that it is much more scratch resistant than other resin flooring systems. The new floor now more than fulfils the clients requirements and will continue to do so for many years.

## Project Details

### Application:

Industrial Flooring

### Market:

Manufacturing Industry - Engineering

### Client:

Heidelberg Graphic Equipment Limited

### Contractor:

Heidelberg Facilities Management
