

WAREHOUSE FLOORS UPGRADED TO MODERN STANDARDS

Specialist refurbishment contractors Blastmaster have recently finished upgrading 3000m² of an old factory floor, which is being redeveloped into four modern industrial units in Cheltenham.

Following preparation the concrete was primed and then a nominal 6mm of Viscacid Optiplan 30, a self smoothing polymer cement screed, was pumped onto the surface. A significant advantage for the installer is the long open time, or 'wet edge' time of the material despite being walkable in only four hours. The surface was then sealed with two coats of Remmers' BS 2000 matt, an advanced fast curing, water dispersed epoxy sealer coat with a durable matt finish.

The resulting floor finish is now level, smooth, sealed and ready for whatever requirements the new tenants will have – it is also extremely hard wearing, chemically resistant and easy to clean.
