Quality Used Car Deals with Remmers!

Short Story:-

The huge Carcraft site in Merseyside has over 1,500 cars displayed – over 400 of these in the 10,000m² showroom. Many cars now come with power steering which is very aggressive to floor finishes. The original floor coating, applied 3 years ago when the showroom first opened, needed upgrading to withstand this abrasive traffic.

Specialist contractors Prestec Limited were asked for their advice and immediately recommended Remmers BS3000 system - a particularly advanced, water based epoxy technology that outperforms all others on the market.

The existing floor was prepared using STR Power Grinders and vacuumed clean. Prestec were able to apply the 2 coat system within just 24 hours, as the system is also fast curing, allowing some traffic to start again only 3 days later. (125 words)

Quality Used Car Deals on Remmers!

Full Story:-

Carcraft are part of the largest independent used car company in the UK, which includes the seven Carcraft hypermarkets in the North of England and the 3 CarLand sites around London.

The huge Carcraft site in Merseyside, covers more than 12 acres with over 1,500 cars displayed – over 400 of these are in the 10,000 square metre indoor showroom. With a great many car movements required, sometimes hundreds every day, with test drives and sales, which are all ongoing continuously 7 days a week. Many of these modern cars now come with power steering as standard, which is very aggressive to floor finishes. The original water based floor coating had been applied 3 years ago, when the showroom first opened, it now already needed upgrading to better withstand this frequent and abrasive traffic.

Specialist contractors Prestec Limited, who had previously carried out other successful flooring work for the Automotive Group, were asked for their advice. Prestec were immediately able to recommend an ideal system from Remmers. The Remmers BS3000 system uses a particularly advanced and unique, water based epoxy technology that outperforms all others on the market. This provides a very high build and hard wearing floor surface, with a 'satin finish' that the client also appreciated.

The existing floor was prepared using STR Power Grinders fitted with light abrasive pads, then it was brushed and vacuumed clean. As the Remmers BS3000 is also fast curing, Prestec were able to apply the 2 coat system within just 24 hours, allowing light traffic to start again only 3 days later. (259 words)

Issued by: Remmers (UK) Limited
Unit B1 The Fleming Centre
