

## SEA KING HELICOPTER HANGAR FLOORS UPGRADED FOR QUALITY

The Royal Naval Air Service wanted to optimise the environment for the maintenance of their Sea King Helicopters in their facilities in the south-west.

Together with their specialist flooring contractor, Acryflor Ltd, they selected the Viscacid BS 2000 and BS 3000 coating system. After preparing the surface of the existing concrete, the profile was levelled using BS 2000 resin blended with quartz sand as a 'scratch coat' and then the water dispersed epoxy based BS 3000 in white was spray applied in two coats.

This system provides a uniform, smooth, sealed and chemically resistant working surface, which is easily cleaned, and where any foreign object debris (FOD) or the smallest components are easily seen and identified. This means that the stringent Royal Naval Air Services Quality Assurance Scheme requirements can always be complied with.
