

LOCK UP SEALED

The owners of storage units in Luton wanted to stop water ingress from below ground through brickwork walls into their storage area, and to improve the overall appearance of their facility to make it both damp proof and attractive to customers.

Their architect and their specialist contractor, Blastoff (GB) Ltd, contacted Remmers (UK) Ltd for technical advice and support. Remmers were able to provide the complete solution with their Aida Kiesol, a modified cementitious system for waterproofing the brickwork, plus their advanced Viscacid flooring systems to address the problem of oil contamination in the floor slab, provide a DPM, and then seal and enhance its appearance.

After removing the oil contamination and thorough surface preparation, Blastoff used Remmers' Primer MT in two coats to provide the DPM, then the floor was sealed, protected and enhanced with Viscacid BS 2000 and Viscacid BS 3000, high performance fast curing water based epoxy coatings in the clients' selected colours.
