

Ready for traffic in 8 days @ 50mm thick

Ronascreed 8 Day Overlay is a fast drying screed additive produced by Ronacrete; it speeds the drying of cementitious screeds and concretes. It has been used in a variety of building projects where early trafficking is a necessity including The London Stock Exchange, numerous London and East Anglian schools, a gymnasium at Oxford University, The Galleries shopping complex in Bristol and the Audi car showroom in Brentford where 6000m² was laid.

Adding Ronascreed 8 Day Overlay to a screed means earlier trafficking and reduced drying time. This allows laying late in the construction program, reducing likely damage by following trades and saving unexpected bills for surface DPMs.

Ronascreed 8 Day Overlay is Ideal for fast-track projects where early access is required and is therefore suitable for commercial, hospital, education, retail and domestic projects, it is also protein free making it suitable for use in food preparation areas. It can be pumped to the point of application and is compatible with underfloor heating and insulation.
