

Servicing Centre Surfaced by Ronacrete

The floor of a former warehouse has been transformed using Ronadeck HB200 to meet the surfacing requirements of a new Volkswagen servicing centre. Ronadeck HB200 is a high build epoxy coating from Ronacrete - resistant to oil and petrol, easy to clean, durable and available in range of attractive colours.

Norman Fern from Normair Workshop Solutions is the main contractor responsible for specifying Ronadeck HB200. Norman comments, "We needed a cost effective, long-lasting, durable surface with a good finish. We have used Ronacrete products before and know they can do the job. HB200 is particularly suited for this type of application because it is resistant to chemicals typically found in a car workshop. The completed floor exceeded the client's requirements in terms of appearance, cleanability and durability – even with constant vehicular traffic."

"The original concrete surface needed some preparation work before it was ready to take Ronadeck HB200 epoxy coating," explained Simeon Osen, Managing Director of Ronacrete Ltd. "A Ronacrete approved contractor vacuum blasted the concrete to clean the surface of contaminants, dust and debris. The contractor then made shallow depth repairs using two of Ronacrete's concrete floor repair mortars, Monoset and Ronafix, before applying three coats of Ronadeck HB200, covering an area of 1800sqm."

Simeon continues, "HB200 is easy to apply, quick to cure and gives a high quality finish. Ronacrete technical advisors are always available to offer assistance and support, helping to ensure a successful installation wherever our products are used."

Ronadeck HB200 is a solvent free high build epoxy floor coating. It is used in areas where contamination from foods, chemicals and grease is likely, such as food processing, warehouses, factories, car workshops and showrooms. The durable surface is easy to clean and long lasting. Slip resistance can be achieved by the incorporation of a fine aggregate.

Ronafix is an advanced SBR formulation which can be used for a multitude of tasks including waterproofing, screeds, bonding, bedding and all concrete repairs. It is the market leader in its class with over 1 million units sold every year.

Monoset is an emergency floor repair mortar that cures to a useable strength within 1 hour for foot and vehicle traffic. It is used on airport runways, roads and carriageways, platforms, stairs and tidal zone areas such as harbour walls - anywhere that only allows for minimum downtime.
