

SPE MP6000 Proving a Point

Following the initial launch of the MP6000 at the SPE Open Day last year SPE reports a high level of interest in the company's flagship Multipurpose Preparation Unit. The machine has now been shown at exhibitions around the world including the BIG 5 in Dubai and The World of Concrete in Las Vegas. Both exhibitions recorded high levels of interest and resulted in welcome export orders for the Lincoln based Surface Preparation Equipment manufacturer.

In the UK Surface Preparation contractor DDC Specialised Planing Ltd took delivery of their first machine in January. DDC specialise in preparation of car parks, bridge decks and roads. The MP6000 is proving to be an important addition to the fleet.

'We have been very pleased with our purchase. The MP6000 has many advantages over the other types of ride on equipment currently being used in the industry. The machine is very quiet in operation, comfortable to operate, highly productive and uses far less abrasive than the equipment we used previously. The unit also has a 415v take off allowing us to run a smaller SPE Pedestrian Autoblast Machine for preparing edge work and inaccessible areas. This has also been combined with a high level of service & back from SPE ' commented Dave Hough, Director of DDC.
