

MOISTURE METER FROM WAGNER ELECTRONICS

The patented Rapid RH® 4.0 is the fastest concrete relative humidity test method available. Different than all other concrete relative humidity testing devices and methods, the Rapid RH® 4.0 design combines a patented Smart Sensor and an *Easy Reader* with patent-pending Touch-n-Sense™ technology for easy-to-use, accurate relative humidity testing for concrete slabs. The Wagner Electronics Rapid RH® 4.0 method is simple and quick.

This innovative, superior technology also allows you to take any additional sets of readings IMMEDIATELY. The *Easy Reader* goes to work on contact. When the *Easy Reader* makes contact with the Smart Sensor, the *Easy Reader* “comes to life” – turning on, taking a reading and holding the data display for 5 minutes before powering off. And because each Rapid RH®4.0 Smart Sensor stays in the test hole, out of the way, subsequent readings can be taken any time with IMMEDIATE results.

No waiting, no hassle. It is also the easiest to comply with industry standards. The Rapid RH® 4.0 is necessary for anyone working with concrete or flooring over it.

For more information visit rapidrh.com to watch our installation video and download our brochure or call +1.541.582.0541. We will be at Harrogate! visit us at booth 26a.
