

Recycling Case Study: 1

ACC FLOORING LTD

Yorkshire- based contractor, ACC Flooring, has put recycling at the forefront of their operations and its newly designed website includes a regularly updated display on the total percentage of waste recycled each month.

ACC Flooring was the first FeRFA contractor to join the Recycling Scheme and is committed to recycling all its waste to achieve its zero to landfill target. It recognised that its operations could affect the local, regional and global environment and wished to do all it could to minimise this impact from manufacture to final disposal.

To reflect this commitment the company has revised its environmental policy and also

informed all its suppliers that it will not accept excessive packaging on any purchases and will only use water borne or solvent free materials. The company has a newly installed waste transfer station and all waste is sorted prior to collection where possible vessels are re-used. ACC Flooring is able to provide monthly waste reports to its clients which clearly demonstrates the percentage of waste being recycled and what type of waste it is.

In 2011 the company was the first recipient of FeRFA's Environmental Initiative Award.
