

THE FeRFA RECYCLING SCHEME

Background

FeRFA's scheme is a major initiative to bring contractors and manufacturers together in a recycling programme for waste packaging. As resin flooring is laid in situ, with minimal material waste produced on site, packaging waste has been identified as the major waste stream. Under the recycling and waste management scheme, waste packaging (hazardous and non hazardous) and other waste streams are collected, decontaminated and reprocessed for future use, with up to 100% of waste being recycled.

To assist members in meeting their own recycling targets FeRFA has joined with Reconomy UK, who offer a complete recycling and waste management system, and Protech Plastics Containers, manufacturers of recycled and recyclable plastic containers.

Working towards Zero Waste to Landfill

FeRFA has adopted a resource efficiency plan which commits to:

- Divert waste from landfill to agreed targets
- Increase year on year the level of waste packaging and other waste streams being recycled and re-used
- Actively promote the use of recycled materials
- Raise awareness of environmental issues and provide guidance and training to increase knowledge and share best practice.

As part of this initiative FeRFA became a signatory to WRAP's Halving Waste to Landfill Commitment in 2012 and we are now working towards "Zero Waste to Landfill".

Why Join The Recycling Scheme?

Managing waste efficiently not only improves your green credentials by meeting your environmental responsibilities, but also increases your efficiency, saves money and resources. The FeRFA scheme offers a complete package, linking with specialist companies, to help you achieve your environmental targets.

Information and Document Downloads

The Recycling section of the FeRFA website www.ferfa.org.uk/recycling.php has more information on the scheme and useful documents to download.
