

Construction waste management

Your
waste
management
experts

Keeping you compliant

At Reconomy, we have a track record of working closely with our construction industry clients and partners, helping them meet the challenges of achieving sustainable construction and legislative compliance.

We're different from other waste management providers because we offer a fully supported service that is tailored to the individual needs of your project. We have experience working within a wide range of construction environments, from commercial developments through to retail premises, leisure facilities and public-sector buildings.

We will ensure waste is properly considered at every stage of your project, keeping you on budget. Our team of waste management professionals provide practical on-site guidance to improve efficiencies and minimise the amount of waste you create.

We can help you to:

- Develop consistent Site Waste Management Plans (SWMPs) across your entire business
- Implement better waste segregation processes to maximise recycling
- Increase your skip and waste container utilisation to reduce waste costs
- Ensure regulatory compliance with environmental legislation
- Improve your carbon footprint by reducing movements and skip exchanges.

We value the principles of a circular economy, in which waste is considered an accepted by-product of a process that, with better forthright planning, can retain a purpose and an inherent value within the wider marketplace.

Reconomy is committed to pioneering change across the commercial construction industry, encouraging the many clients we work with to think differently about recycling, efficient waste management and waste minimisation.

Redefining waste management

We manage a network of over 1,000 pre-approved, regionally-operating supply chain partners.

Collectively, this network gives us nationwide coverage, enabling us to service your needs anywhere in the UK, along with the means to identify many innovative outlets for waste.

Each year we conduct hundreds of visits to our supply chain partners to assess their overall performance, environmental credentials and their health and safety compliance. Not only is this helping to ensure they deliver an efficient, cost-effective and dependable service, it is ultimately driving sector-wide improvements.

Reconomy is committed to adding value wherever possible, delivering many unique benefits to our clients:

Rethinking

We have experience working at all types of sites - from tightly constrained city centre locations to live environments with heavy public access. We will work closely with you to develop a solution that meets your specific requirements but also considers your site's limitations. Our Contract Managers can also deliver practical advice and training to help improve on-site segregation.

Reporting

Better reporting is fundamental to minimising the amount of waste you generate. The Reconomy Portal, our industry-leading online reporting platform, gives you complete visibility of your waste streams from creation through to disposal, keeping you up-to-date and in control.

Reassurance

Reconomy staff, along with our network of pre-approved supply partners, have years of industry expertise. We give peace of mind by ensuring our clients are compliant with all relevant waste management legislation.

Reduced costs

Because we drive so much business through our network of supply partners, we will proactively negotiate prices on your behalf, giving you confidence that the price you pay is always competitive.

Reorganisation

Why deal with numerous regional suppliers when you can have one single point of contact? Let us streamline your administrative processes by centrally co-ordinating your waste services across all your projects and sites nationwide.

Diverse service offering

We offer a wide range of key waste management services to companies of all sizes - from SMEs through to nationally-operating contractors.

Skip and container hire

Because every project is different, we offer a wide selection of skips and containers. From 4 yard mini skips through to 40 yard roll on, roll off (RoRo) containers, our extensive range allows us to meet your exacting needs, large or small.

Managed on-site solutions

Our fully managed service brings together all aspects of on-site waste management. Our team of Contract Managers can take the burden off your shoulders by creating Site Waste Management Plans (SWMPs), providing training to improve waste segregation and maximising the utilisation of your skips and containers.

Technical and hazardous waste

We remove the stresses of compliance by ensuring all technical and hazardous waste is collected, treated and dealt with safely and efficiently.

Aggregates and tipping solutions

Whether you require primary quarry-sourced or high-quality recycled aggregates, we can meet your needs. We also have access to a large network of quarries, recycling centres and tipping facilities, which are strategically located all over the UK for ease and convenience.

Plant, welfare and site services

Finding the right equipment can be time consuming. We can source whatever you need for whenever you need it, including: generators, crawler cranes, plant machinery, accommodation and welfare units, portable toilets, water bowsers and more.

The Reconomy Portal

All our commercial construction clients are provided with access to The Reconomy Portal – our industry-leading online reporting platform. The portal allows you to take a holistic view of all your waste data, as well as drill down to individual site-level detail.

About Reconomy

We deliver innovative solutions that take the hassle out of waste management, optimising both the environmental and financial performance of our clients.

We manage over 3m tonnes of waste per year, achieving an average landfill diversion figure of 93% on behalf of our clients. We're different from most waste management operators because we focus on waste minimisation strategies for our clients, rather than just the efficient management of pre-existing volumes.

This allows us to reduce our clients' overall waste spend, improving their carbon footprint and exceeding their corporate social responsibility targets for waste management and sustainability.

Our nationwide service operates across four key sectors: commercial construction, housebuilding, infrastructure, and business & industry. We have helped thousands of companies within these sectors to recycle, process or dispose of waste in a responsible, sustainable and cost-effective way.

Instead of operating on a site-by-site basis, we work to establish regional and national framework agreements with each of our clients. This enables us to implement a consistent best practice approach to waste minimisation across multiple sites simultaneously, ensuring every opportunity for reuse and recycling is taken.

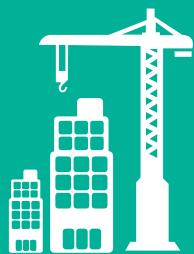

Our client-base is exceptionally broad and we welcome the opportunity to work with businesses of all sizes; from SMEs, through to nationally-operating blue-chip companies.

Owned by private equity firm, EMK Capital, Reconomy is committed to pioneering long-term improvements within the waste industry through technical innovations, cultural change and by challenging business attitudes towards waste.
