

FeRFA RECYCLING SCHEME

BACKGROUND

As the leading body for the UK resin flooring industry, FeRFA is committed to the implementation of sustainable practices by reducing the amount of waste produced. As resin flooring is laid in situ, minimal material waste is produced on site, therefore the major waste stream for the resin flooring industry has been identified as packaging waste.

improve waste
management
and reduce
your overheads

FeRFA RECYCLING SCHEME

Resin flooring materials are packaged in both plastic and metal containers, and once product is used, the waste packaging often contains residues. As such, the waste packaging may be defined as hazardous by the producer in accordance with Hazardous Waste Regulations and Special Waste Regulations. The FeRFA recycling scheme provides a specialist collection service for all waste packaging (both hazardous and non hazardous), with up to 100% being recycled and/or recovered for future use in a variety of applications.

HOW DOES THE SCHEME WORK?

Working with Reconomy and Protech Plastics Containers, FeRFA members can sign up to a complete recycling and waste management system. By signing up to the scheme, FeRFA members receive:

- assistance on effective recycling from FeRFA partners
- access to online guidance from the FeRFA website
- environmental template and guide
- use of the “Halving Waste to Landfill” logo

FeRFA CONTRACTORS -

Simply contact Reconomy on **0845 230 5566** for specialist advice and a competitive quote. Reconomy offer a complete service to handle all waste requirements, such as the correct skip size for your yard and/or construction site, which will help reduce waste management costs. With up to 100% of waste being recycled, contractors receive monthly reports to provide a full audit trail. Full details of the service can be downloaded from <http://www.ferfa.org.uk/recycling.php>

FeRFA MANUFACTURERS -

Minimising waste at manufacturing sites and a commitment to supply resin materials in recyclable packaging are key priorities. Reconomy (**0845 230 5566**) can advise on the most efficient and cost effective way to handle waste as part of their free waste consultancy and training service, backed up by a full reporting service to give visibility of waste by both weight and volume as well as the amount recovered and recycled.
