February, 2022

HUSQVARNA INTRODUCES NEW RANGE OF VERSATILE H-CLASS DUST EXTRACTORS

During 2022, Husqvarna Construction will launch its new range of versatile H-class dust extractors. Created to compliment working with grinders, power cutters, drill motors and other light construction equipment, the five dust extractors in the range include two battery driven models and are designed to contribute to a healthier working environment while increasing productivity.

"On any construction job, dust is the enemy. It can harm machine operators. It can cause problems with equipment. And it can have a negative effect on working efficiency. With our new dust extractors, you can immediately take a major step towards creating a better working environment for yourself and your colleagues."

States Joakim-Leff Hallstein, Director Product and Service Management for Concrete Surfaces & Floors at Husqvarna.

Husqvarna's new versatile H-class dust extractors feature new e-flow technology that enables continuous high performance. A redesigned filter cleaning mechanism also ensures the cleaning process can be done by simply closing the inlet and pressing a button. Also, a cost-efficient, improved LONGOPAC® dust bag attachment system in combination with long filter lifetime delivers low cost of ownership. Christofer Swahn, Global Product Manager:

"New filter technology enables higher productivity through reduced downtime and all five models in this new range comply with the latest H-class standards for heavy-duty dust extractors usage. They are also equipped with EN1822 certified HEPA 13 filters. At the same time, the machines

offer compact design and smart features such as e-flow technology, improved HMI for easy on-site trouble shooting, fast hose connection, an integrated inlet cap and a smart dust cap that helps reduce exposure to dust."

Lightweight yet robust construction, ease of manoeuvrability and lockable wheels make moving between sites and floors simpler and safer with less strain on the user – and it's this focus on improving working conditions for the user that is a key characteristic of the new range.

The new range includes two battery driven models (PACE and i-series) that offer the same features as corded models and the extra convenience of cordless operation. As well as making them quick to set up and start using, no power grid connection is required, optimising working time and versatility. Together with a comprehensive series of accessories and Husqvarna Fleet Services™ including geo-location info, predictive maintenance and wireless updates, Christofer Swahn believes that the all-round benefits of the range represent true business value.

"Versatility is something our construction professionals appreciate. These machines are ideal for multiple applications, which reflects user demands perfectly. They also understand the difference a high quality, ergonomically superior dust extractor can make to their working day. Consider these points and we believe our new H-class range will strengthen our position as a total solutions provider."

HIGH STANDARDS

All five models in this new range of compact dust extractors comply with the latest H-class standards for heavy-duty dust extractors usage. They are also equipped with EN1822 certified HEPA H13-filters.

SOME MAIN FEATURES:

- Continuous high performance with e-flow
- New effortless filter cleaning mechanism
- The HMI (control panel) provides warnings on operational maintenance
- Improved Longopac® attachment system ensures safer and easier handling
- Compact size and light weight – easy to transport.

FOR MULTIPLE APPLICATIONS

- Power cutters
- Drilling equipment
- Floor grinding
- Handheld power tools
- Shot-blasting
- Scarifying
- Scraping
- Floor tools and more

TWO OPTIMISED BATTERY ECO-SYSTEMS

The cordless models feature two different battery eco-systems, both of which can be used to power a constantly increasing range of Husqvarna products. Furthermore, both battery driven dust extractors give you the flexibility to use with many (battery) power tools.

DE 120 PACE

BATTERY SYSTEM: PACE

DE 110i

BATTERY SYSTEM: BLi

BATTERY RUNTIME:

BLi300: up to 39 minutes

BLi200: up to 22 minutes

PACE – BATTERIES B380X AND B750X

The sturdy design of the Husqvarna PACE Battery System enables usage in tough, heavy-duty conditions, indoors and outdoors. It is available in two battery sizes, both of which deliver high power and fast charging – and a job well done.

PACE 

I-SERIES – BATTERIES BLi200 AND BLi300

These batteries offer excellent runtime, high capacity to weight ratio a 4-LED charge level indicator, all-weather operation and excellent cooling characteristics. They can also be recharged more than 1500 times.
